# PRODUCTS FOR LAB FILTRATION

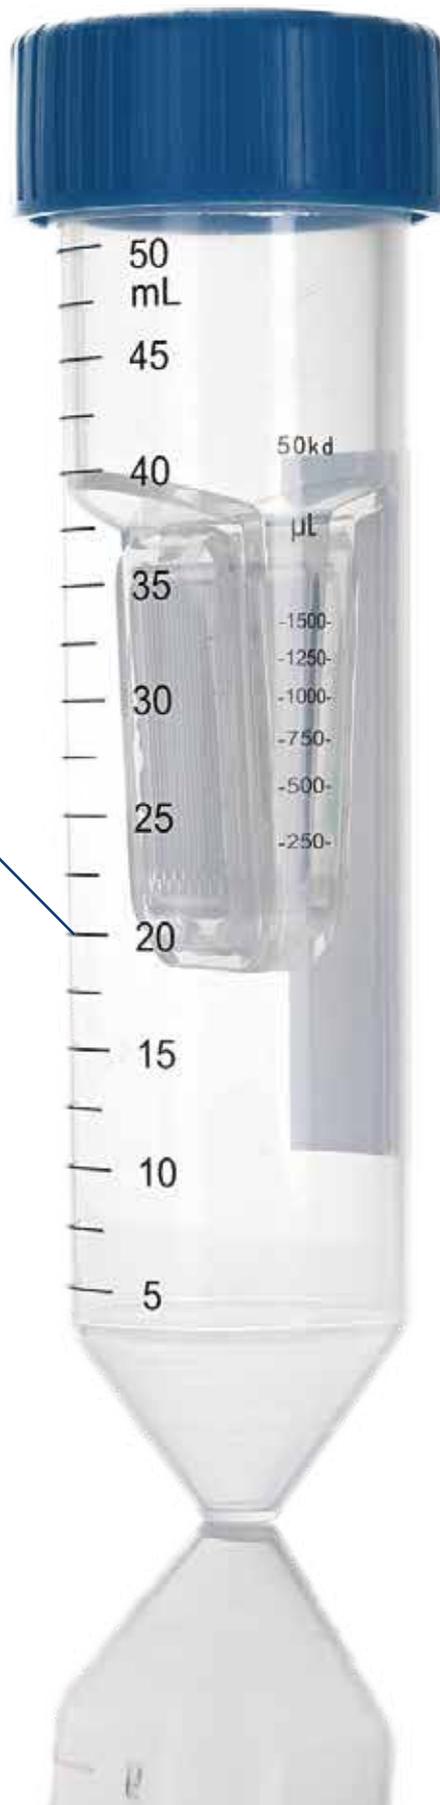

[www.biozhongzai.com](http://www.biozhongzai.com)

# Ultrafiltration Tube

- ◆ The composite PES membrane provides a stable hydraulic environment with outstanding mechanical strength and integrity.

- ◆ The dense structure enables higher fluxes with excellent retention and higher yields.
- ◆ Low to moderate protein binding is suitable for protein solutions with protein content greater than 0.1mg/mL.
- ◆ A wide range of molecular weight retention rates are available to suit various applications.

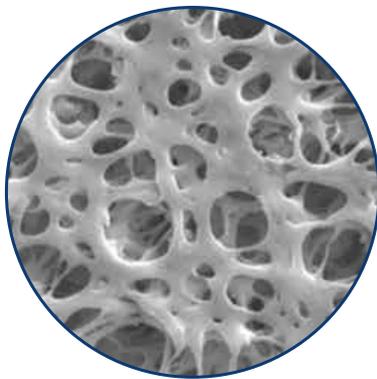

# Ultrafiltration Tube

**Ultrafiltration (UF)** is the process of separating very small particles from a fluid and molecules in a solution. The main separation principle is to screen molecules of different molecular sizes according to the pore size. The molecular weight of the ultrafiltration membrane is between 1000Da and 1000kDa.

## Features

- Film material :PES(Polyethersulfone)
- Film thickness: 210  $\mu\text{m}$
- Applicable pH range :1-14
- Maximum operating temperature :80°C
- Polyether sulfone membrane (PES) has good hydrophilicity and flux, good chemical stability and inertness, stable alkaline PH, and high drug compatibility.
- Low biological binding and high chemical compatibility.

## Catalog

Molecular cut off	Material	Water flux	Outer tube/inner tube(ml)	Package	Product number
5kd	PES	3 lmh/psi	50/15	12 pcs/box	UT0650005
10kd	PES	5 lmh/psi	50/15	12 pcs/box	UT0650010
30kd	PES	13 lmh/psi	50/15	12 pcs/box	UT0650030
50kd	PES	17 lmh/psi	50/15	12 pcs/box	UT0650050
100kd	PES	37 lmh/psi	50/15	12 pcs/box	UT0650100

# Bottle-top Filter

## Efficient

Using the negative pressure generated by the vacuum pump for operation can greatly improve the filtration efficiency and achieve efficient solid-liquid separation.

Recevier	Capacity(mL)	Package	Product number

# Syringe Filter

## Features

·Application compatibility: Broad range of filtration media meets diverse application needs.

·Minimum sample hold-up: Syringe filter's housings are specifically designed to maximize sample recovery.

**Note:** Depending on the specifications, needle filters in light green, light blue, yellow, white, red, purple and other appearance colors are available.

# Comparison of biofiltration membrane separation techniques

The following figure shows the common filtrate and particles, and the operator can choose the filtration/separation technique depending on the size/type of filtrate or particle.

## Application of biofiltration membrane separation technology

When selecting a filtration membrane, it is necessary to consider factors such as application requirements, the nature of the treatment liquid and operating conditions.

Applications	Sample type	pH	Recommend Products
Wide range	Gas		PTFE(Hydrophobic),PP
Chemistry lab	Aqueous solution	pH 1-14	PES
		pH 2-13	Nylon,PES
		pH 4-10	PES,MCE
	Organic solvent		Nylon,PTFE(Hydrophobic), PVDF(Hydrophobic)
Biological lab	Strong acid, strong base, strong polarity, strong corrosive solution		PTFE(Hydrophobic/Hydrophilic)
	Cell culture medium		PES,MCE,CA,PVDF(Hydrophilic)
	Biological solutions, proteins, peptides	pH 1-12	PES(Low protein adsorption), PVDF(Hydrophilic)
Environmental lab	Bacterial filtration test of surface water and bottled water	pH 4-10	PES,CA
General lab	Various liquid samples are pre-filtered		MCE,CN,CA
			Glass Fibre,PP
